

Project Description:

The client wanted to transform her mosquito infested yard into a place where she could relax and entertain her friends and family, VaceTime was hired to manage this project, which was completed in 2018. We first created the design for this project to resemble the client's favorite retreat location in Orlando, FL. VaceTime cultivated the soil, treated the area with pesticide, and painted the fence. VaceTime then leveled the soil and contained future growth of vegetation using weed block; leaving one area exposed to add sod for the feel of natural grass. VaceTime then Added stone and pavers to cover the weed block and assembled the firepit and lounge chairs. VaceTime trimmed the borders with edging, planted annuals to encourage natural pollination, and then lined the border with mulch. The mulch will serve as a natural moister control that will assist with the Ph levels of the plants and limit the nesting mosquitoes.
