Project Description:

The client needed a sandbox created within seven days to create a skating rink on dirt in late October. The dirt was uneven by three feet in some areas, so we had to excavate the soil to even the soil. At the same time as the excavation, we built the exterior of the 5,640-foot timber skating rink on site in a day and a half. The next day we received 40 yards of rock dust. Then, we leveled and packed the rock dust over the next day and a half. The fourth day two hours was spent perfecting touching up a few imperfection.
